GOLDHAVEN COMPLETES INAUGURAL DRILL PROGRAM AT MAGNO PROJECT, INTERSECTING MULTIPLE MINERALIZED ZONES

Drilling encounters broad tungsten-bearing skarn intervals at Kuhn and multiple zones of semi-massive to massive sulphides at D Zone; assay results pending

Vancouver, British Columbia – November 16th, 2026 – GoldHaven Resources Corp. ("GoldHaven" or the "Company") (CSE: GOH) (OTCQB: GHVNF) (FSE: 4QS) is pleased to announce the successful completion of its inaugural 2026 diamond drilling program at its 100%-owned Magno Project, located in the Cassiar District of northwestern British Columbia.

The program comprised approximately **3,495 metres across 21 diamond drill holes**, focused on the historical Kuhn tungsten-skarn system and the D Zone silver-lead-zinc target.

The completion of the program represents a significant milestone for GoldHaven, providing modern drill-core information from two priority mineralized systems and establishing a foundation for continued exploration across the Company's district-scale Magno Project.

2026 Drill Program Highlights

- **3,495 metres completed:** A total of 21 diamond drill holes completed during GoldHaven's inaugural drill campaign at Magno.
- **Kuhn Tungsten Target:** Drilling evaluated the geometry, thickness and potential extensions of the historical tungsten-bearing skarn system, encountering broad intervals of skarn mineralization.
- **D Zone Silver-Lead-Zinc Target:** Drilling intersected multiple intervals of semi-massive to massive sulphide mineralization, including previously reported intersections at Middle D.
- **Multiple Mineral Systems:** The program advanced GoldHaven's understanding of both tungsten-bearing skarn and polymetallic silver-lead-zinc mineralization within the broader Magno Project.
- **Assays Pending:** Laboratory analytical results are pending for drill-core samples, with results to be reported as they are received, reviewed and verified.

*** This news release contains several references to visual observations which, are not a substitute for laboratory analysis. Assays may not confirm the presence, grade or extent of mineralization.

Advancing Two Priority Mineral Systems at Magno

The 2026 drilling campaign was designed to evaluate priority targets identified through historical exploration, modern geological interpretation, surface sampling and geophysical surveys.

Kuhn Tungsten-Skarn System

Drilling commenced at the historical Kuhn tungsten target, where the Company completed 8 drill holes totalling approximately 1,737 metres.

The program focused on evaluating the continuity, geometry and potential extensions of tungsten-bearing skarn mineralization previously identified through historical exploration.

As reported in the Company's September 2026 news releases, drilling encountered broad skarn intervals, including an approximately 50-metre interval[1] in drill hole GOH26-04. These observations have provided additional geological information to assist in evaluating the extent of the mineralized system.

D Zone Silver-Lead-Zinc System

Following completion of drilling at Kuhn, the program advanced to the D Zone, where 13 drill holes totalling approximately 1,758 metres were completed.

The D Zone program targeted polymetallic mineralization associated with the carbonate replacement-style system identified through historical exploration and recent fieldwork.

As previously announced, drilling at Middle D intersected multiple horizons of semi-massive to massive sulphide mineralization, including visible galena and sphalerite.

The drilling has provided valuable geological information regarding the distribution and geometry of the mineralized horizons and will assist the Company in evaluating potential extensions and future drill targets.

The Company believes the combination of historical results, modern geophysical data and observations from the 2026 drilling program provides an important foundation for continued exploration of the D Zone system.

Management Commentary

Rob Birmingham, President and CEO of GoldHaven, commented:

"The completion of our inaugural drill program at Magno marks an important milestone for GoldHaven. Over the course of the season, our team successfully advanced two distinct mineralized systems, providing us with valuable geological information and a much stronger foundation for future exploration.

[1] Intervals are drilled core lengths, true widths are not yet known.

"We are particularly encouraged by the broad skarn intervals encountered at Kuhn and the multiple zones of sulphide mineralization identified at D Zone. With laboratory assays pending, we look forward to evaluating the results and determining the next steps for these targets.

"This has been a productive first drilling season for GoldHaven, and we are excited about the opportunity to build on this work as we continue to advance the broader Magno Project."

Next Steps

With the 2026 drilling program now complete, GoldHaven's immediate priorities include:

- Receiving, reviewing and validating pending laboratory assay results from the 2026 drilling program.
- Integrating assay results with ongoing 3D modelling, geological logging, structural interpretations, and geophysical data.
- Evaluating the distribution and potential continuity of mineralization at both Kuhn and D Zone.
- Identifying and prioritizing follow-up exploration and drilling targets for future programs.

The Company anticipates receiving laboratory assay results in the near term and intends to provide further updates as results become available and have passed the appropriate quality assurance and quality control review.

Quality Assurance / Quality Control

The reported visual observations are selective in nature and represent individual drill intervals. Results should not be considered representative of average mineralization grades and drill widths or the continuity of mineralization across the property.

Qualified Person

The scientific and technical information contained in this news release has been reviewed and approved by Raymond Wladichuk, P.Geo., B.Sc., a Qualified Person as defined under National Instrument 43-101 – Standards of Disclosure for Mineral Projects. Mr. Wladichuk is not independent of the Company and is a practicing member in good standing with Engineers and Geoscientists British Columbia.

About GoldHaven Resources Corp.

GoldHaven Resources Corp. is a Canadian junior exploration company focused on advancing highly prospective mineral projects in North and South America. The Company's flagship asset is the district-scale Magno Project in the Cassiar District of northwestern British Columbia. GoldHaven also owns the Three Guardsmen Copper-Gold Project in British Columbia and the Copeçal Gold Project in Mato Grosso, Brazil. In addition, the Company holds a portfolio of critical mineral projects in Brazil.

Cautionary Statements Regarding Forward-Looking Information

This news release contains forward-looking statements and forward-looking information (collectively, "forward-looking statements") within the meaning of applicable Canadian and U.S. securities legislation, including the United States Private Securities Litigation Reform Act of 1995. All statements, other than statements of historical fact, included herein including, without limitation, those listed below under the heading "Forward-Looking Statements in This News Release" are forward-looking statements. Although the Company believes that such statements are reasonable, it can give no assurance that such expectations will prove to be correct. Forward-

looking statements are typically identified by words such as: "believes", "will", "expects", "anticipates", "intends", "estimates", "plans", "may", "should", "potential", "scheduled", or variations of such words and phrases and similar expressions, which, by their nature, refer to future events or results that may, could, would, might or will occur or be taken or achieved. In making the forward-looking statements in this news release, the Company has applied several material assumptions, including without limitation, that there will be investor interest in future financings, market fundamentals will result in sustained metals and critical minerals demand and prices, the receipt of any necessary permits, licenses and regulatory approvals in connection with the future exploration and development of any future projects in a timely manner, the availability of financing on suitable terms for exploration and development of future projects and the Company's ability to comply with environmental, health and safety laws.

The Company cautions investors that any forward-looking statements by the Company are not guarantees of future results or performance, and that actual results may differ materially from those in forward-looking statements as a result of various factors, including operating and technical difficulties in connection with mineral exploration and development activities, actual results of exploration activities, the estimation or realization of mineral reserves and mineral resources, the inability of the Company to obtain the necessary financing required to conduct its business and affairs, as currently contemplated, the inability of the Company to enter into definitive agreements in respect of possible letters of intent, the timing and amount of estimated future production, the costs of production, capital expenditures, the costs and timing of the development of new deposits, requirements for additional capital, future prices of precious metals, changes in general economic conditions, changes in the financial markets and in the demand and market price for commodities, lack of investor interest in future financings, accidents, labour disputes and other risks of the mining industry, delays in obtaining governmental approvals, permits or financing or in the completion of development or construction activities, changes in laws, regulations and policies affecting mining operations, title disputes, the inability of the Company to obtain any necessary permits, consents, approvals or authorizations, including by the CSE, the timing and possible outcome of any pending litigation, environmental issues and liabilities, and that that visual observations of drill core may not be confirmed by laboratory assays, that drill results may not be representative of the broader mineralized system, and that follow-up work may not confirm mineralization, and other risks and uncertainties disclosed in the Company's latest interim Management's Discussion and Analysis as filed with certain securities commissions in Canada. All of the Company's Canadian public disclosure filings may be accessed via www.sedarplus.ca and readers are urged to review these materials.

Readers are cautioned not to place undue reliance on forward-looking statements. The Company undertakes no obligation to update any of the forward-looking statements in this news release or incorporated by reference herein, except as otherwise required by law.

Forward-Looking Statements in This News Release

The following statements in this news release constitute forward-looking information:

- *The Company's expectation that laboratory assay results from the 2026 drilling program will be received in the near term, and its intention to report such results as they are received, reviewed and verified, following appropriate quality assurance and quality control review;*
- *The 2026 drilling program establishing a foundation for continued exploration at the Kuhn and D Zone targets and across the broader Magno Project;*
- *The use of geological information and observations from the 2026 drilling program to evaluate the extent of the Kuhn tungsten-skarn system and potential extensions and future drill targets at the D Zone;*
- *The Company's planned next steps, including the integration of assay results with 3D modelling, geological logging, structural interpretations and geophysical data, and the evaluation of the distribution and potential continuity of mineralization at Kuhn and the D Zone;*
- *The identification and prioritization of follow-up exploration and drilling targets for future programs; and*
- *The Company's ability to build on the 2026 drilling program as it continues to advance the broader Magno Project.*
