Sekur Private Data Government Team Attending DoDIIS Worldwide Intelligence Conference

Company introduces SekurOne CUI communications capabilities to the Intelligence Community ahead of October launch

---

MIAMI, FL — August 10, 2026 — Sekur Private Data, Inc., a Miami-based Swiss-hosted cybersecurity, private communications, and defense communications company serving enterprise, government, and defense clients, and a wholly owned U.S. subsidiary of Sekur Private Data (OTCQB: SWISF | CSE: SKUR | FRA: GDT0) ("Sekur" or the "Company"), today announced that it is attending the 2026 DoDIIS Worldwide Conference, the Defense Intelligence Agency's annual Intelligence Community technology conference, held August 9–12, 2026 at the Tampa Convention Center in Tampa, Florida.

Sekur's Special and Strategic Advisors are attending the conference, introducing Sekur and its Controlled Unclassified Information (CUI) communications capabilities and meeting with interested parties. The effort is intended to engage the Intelligence Community in a single venue and discuss how SekurOne and other Sekur solutions can serve the Intelligence Community and its periphery.

As the Company prepares to launch SekurOne, it has begun pre-sales engagements with multiple potential clients, partners and distributors. SekurOne is scheduled to launch officially in the first week of October, with paid BETA clients onboarding in September.

SekurOne bundles fully encrypted voice and video, email, messaging, and VPN into a single identity-protected platform engineered on the Company's proprietary HeliX data transfer architecture — purpose-built to defeat telecom network tracing, resist Pegasus-style malware intrusion, and support CUI handling requirements. This is the exact requirement set of the defense, federal, and executive buyers the Company is now targeting.

Sekur Core Communications Solutions

Sekur delivers secure communications that work within and beyond the Sekur network, operating independently of conventional telecom infrastructure to reduce exposure to interception, SIGINT collection, traffic analysis, metadata exploitation, and hostile surveillance in contested environments. No Sekur solution data-mines or location-tracks its users.

All solutions are built on proprietary architecture with zero reliance on Big Tech, meeting the privacy, security, and OPSEC requirements of intelligence agencies, defense and federal organizations, military commands, diplomatic missions, government agencies, executives, and professionals handling CUI and other sensitive, mission-critical information. Deployments are supported by on-premises infrastructure options for full data sovereignty, mission assurance, and sole control over keys and data.

SekurOne — Encrypted Voice/Video, Email, Messaging, and VPN

A fully encrypted communications platform engineered on proprietary HeliX data transfer architecture, purpose-built to defeat telecom network tracing, resist Pegasus-style malware intrusion, and support CUI handling requirements. SekurOne is designed for defense and federal officials, military commanders, government leaders, and executives conducting confidential, operational, or sensitive conversations where standard carrier-based voice and video platforms present unacceptable interception and exploitation risk.

Call-by-Invite capability via SMS or SekurSend email ensures controlled access and eliminates unsolicited contact. Each user is assigned a unique Sekur ID for identity management, with no phone number required — preserving user privacy across all voice and video communications.

SekurMail — Secure Business and Executive Email

An enterprise- and government-grade encrypted email platform designed for defense and federal agencies, military commands, senior government officials, C-suite executives, and organizations handling confidential and operationally sensitive communications, including CUI correspondence. Built on proprietary architecture with zero Big Tech dependencies and no metadata tracking, SekurMail keeps sensitive communications private between sender and recipient.

Key capabilities include SekurSend/SekurReply for secure delivery to non-Sekur recipients without exposing sender identity or message content; full message delivery control and audit capability; encrypted file transfer; custom domain support for organizational integration; and active protection against phishing, social engineering, and Business Email Compromise (BEC) attacks targeting corporate and administrative networks.

SekurMessenger — Secure Team Messaging and Collaboration

A secure messaging platform providing end-to-end encrypted text, file transfer, voice messages, and collaboration capabilities for defense, military, government, and executive teams coordinating operational and mission-sensitive information, including CUI material. Features include self-destructing messages, encrypted file transfers, and compliance-grade archiving for recordkeeping and audit requirements.

Cross-network secure communications with non-Sekur users are supported via Chat-by-Invite, enabling secure coordination with coalition partners, external agencies, and field elements without compromising the network. Each user is assigned a unique Sekur ID for identity verification and contact authentication, with no phone number required.

SekurVPN — Enterprise Network Security and Identity Protection

An enterprise-grade Virtual Private Network leveraging proprietary HeliX encryption technology, engineered to provide secure internet access, identity obfuscation, and traffic protection for defense organizations, military and federal personnel, government agencies, and executives operating across remote, traveling, deployed, forward, or untrusted network environments.

SekurVPN maintains zero data logging, ensuring no record of user activity exists that could be exposed through legal process, network compromise, or third-party collection. It is built for defense, government, and executive use cases — including protection of traffic associated with CUI and operationally sensitive workflows — where standard commercial VPN solutions present unacceptable privacy and security risk.

SekurRelay — Executive-Level Secure Email Integration

An enterprise-grade secure email relay solution enabling domain splitting, which allows organizations to establish secure communications at the executive, board, or senior staff level without requiring full organizational migration or infrastructure overhaul.

SekurRelay removes one of the most significant barriers to large-scale defense, government, and enterprise deployment, enabling phased adoption that protects command leadership, flag officers, and the highest-value personnel and communications immediately while broader organizational rollout proceeds. It is designed for defense and government organizations, regulated industries, and enterprises requiring rapid, low-friction elevation of communications security at the command and executive tier, including environments handling CUI communications.

About Sekur Private Data

About Sekur Private Data

Sekur Private Data is a Swiss-hosted cybersecurity, defense communications, and privacy solutions provider, offering a secure suite of tools to protect governments, defense and federal agencies, businesses, and individuals from unauthorized access and cyber threats. With capabilities such as SekurOne, SekurMail, SekurMessenger, and SekurVPN, Sekur provides a reliable and secure means of digital communication and data storage for Controlled Unclassified Information (CUI), classified-adjacent and civilian communications use, grounded in Swiss privacy standards with on-premises infrastructure for government agencies, allowing for data sovereignty. Sekur sells its solutions through its website **www.sekur.com**, approved distributors and telecommunications companies globally, and through the **U.S. General Services Administration (GSA) Multiple Award Schedule (MAS), Contract No. 47QTCA18D0089** serving governments, defense institutions, federal agencies, businesses, and consumers worldwide. Sekur's main sales operations are in Miami, USA.
