

CASCADE COPPER COMPLETES TRANSACTION TO HOLD 100% OF THE COPPER PLATEAU PORPHYRY PROJECT, SOUTH-CENTRAL BC

For Immediate Release

Vancouver, British Columbia – July 8, 2026. Cascade Copper Corp. (CSE: “CASC”/FRA: 910) (“**Cascade**” or the “**Company**”) is pleased to announce that it has completed the transaction to acquire the 10% participating interest in the **Copper Plateau Project** from the vendor for a cash sum of \$10,000. The Company now owns 100% of the 2,789-hectare Copper Plateau Porphyry project (the **Project**) located in south-central British Columbia, Canada.

"Securing the final 10% of the Copper Plateau Porphyry Project at a bargain price, in this copper market, is a fairly significant transaction for our shareholders," stated Jeffrey Ackert, President and CEO of Cascade Copper. "The project is now fully unencumbered — with no fractional ownership, no spending commitments, and no underlying royalties — positioning us to aggressively advance this high-potential asset and maximize shareholder value."

Project Location

The Copper Plateau Porphyry project is located in south-central British Columbia, between Penticton and Princeton. It is situated south of the former Brenda Copper Mine, which produced 177 million tonnes of ore grading 0.169% Cu and 0.043% Mo between 1970 and 1990³. The geological setting is within the Quesnel Terrane which hosts Copper Mountain (M&I Resource: 124.7Mt @ 0.21% Cu, 0.11 g/t Au, and 0.68 g/t Ag²) about 40km southwest of Copper Plateau and Teck's Highland Valley Copper Mine (M&I Resource: 831Mt @ 0.28% Cu, 0.009% Mo¹). Kodiak Copper's MPD project lies 40km west of the Project.

What's Next

The Notice of Work ("NoW") submission for a maiden drill program at Copper Plateau is now under technical review with the BC Ministry of Mining and Critical Metals and is expected to be completed within the next month. In the meantime, a project wide Induced Polarization (IP) survey is being contemplated to help establish drill targets outside of the Main Mineralized Zone. Drilling at Copper Plateau is planned in 2026.

The technical information in this news release was prepared and approved by Shannon Baird, P.Geo., a Qualified Person as defined in National Instrument 43-101. Mr. Baird is Vice President Exploration of Cascade Copper Corp. and registered as a Professional Geoscientist with the Professional Geoscientists of Ontario as well as the Engineers and Geoscientists of British Columbia.

About Cascade Copper

Cascade Copper is an exploration stage natural resource company engaged in the evaluation, acquisition, and exploration of copper based mineral resource properties. Cascade is focused on copper and gold, porphyry and mesothermal gold deposits in British Columbia and VMS and BIF copper, gold, and silver style deposits in Ontario. Cascade's priority is to conduct exploration using modern technology that includes 3D inversion modelling of geophysics, LiDAR elevation models, and AI enhanced Predictive Modelling from all historic and modern data inputs. Drilling is planned on several of its copper-gold targets this year. Cascade has five projects, including the Copper Plateau Copper-Moly Project, the Centrefire Copper-Gold Project, the Rogers Creek Copper-Gold Project, the Fire Mountain Copper-Gold Project, and the Bendor Gold-Tungsten Project.
